

PAMIR WEBS™ INTERNET SERVICES AND vSAT EQUIPMENTS. iDirect Evolution

#

iDirect evolution platform we are using two different satellites in Afghanistan to provide high level service for our customers.

Eutelsat W6 coverage, 21.5° East

Eutelsat EB4, 4° East

For our customers we are offering unlimited service, however if you are interested in cheaper service you can always use one of our FAP services. FAP means Fair Access Policy and is a bandwidth cap, also known as a bit cap which limits the transfer of a specified amount of data over a period of time. Internet service providers commonly apply a cap when a channel intended to be shared by many users becomes overloaded, or may be overloaded, by a few users.

VSAI Equipment: iDirect Evolution X3

PAMIR WEBS™ INTERNET SERVICES AND vSAT EQUIPMENTS.

Evolution X3 is the first next generation satellite router featuring iDirect's highly efficient implementation of the DVBS2 standard. With Adaptive Coding and Modulation (ACM) on the outbound carrier and iDirect's patented, deterministic TDMA return channel, Evolution X3 maximizes efficiency of satellite capacity to enable new opportunities for star topology networking. Evolution X3 is ideally suited for broadband requirements such as Internet and VPN access to enterprise networks, as well as real-time VoIP and videoconferencing.
