

Dear Clients,

From 1st February 2011 we will start our vps server hosting services, now you can get vps servers in shared hosting account price range.

The vps server is a full controllable server by client for those customers who want to have the full control over their servers.

In vps server you can install and uninstall any software or os you want by your own choice and you will have the full control over your server for rebooting the server, installing new os, installing new products and etc.

For more information please visit www.pamirwebhost.com

Regards,

Pamir Webs Staff
